

RISK PREVENTION

Prometheus Alliance Joint response in case of fires, fires in hard-to-reach areas, and search and rescue interventions

The problem.

Project's solution

The Romania–Ukraine border area faces increasing climate-related risks, such as floods, landslides, and vegetation fires, which are worsened by outdated infrastructure and limited intervention capacity. These challenges demand coordinated, cross-border action. The project strengthens joint disaster prevention and response by upgrading equipment, harmonizing methodologies, and training emergency and law enforcement teams. Through enhanced cooperation and modern technology, it improves public safety, builds mutual trust, and fosters resilience to natural and man-made disasters.
