

Dolyna and Baia Sprie contribute to the health of the residents

The problem. Project's solution

Dolyna and Baia Sprie face major healthcare challenges: outdated infrastructure and equipment, staff shortages due to emigration, limited access for vulnerable groups, and poor health indicators.

To address these, the project will modernize medical facilities, introduce telemedicine and mobile medical teams, improve staff training, and promote health education. These actions will ensure better access to quality care for all population segments, especially the elderly and vulnerable, and will strengthen cross-border cooperation in healthcare service delivery.
